LIDOCAINE HYDROCHLORIDE ORAL TOPICAL SOLUTION USP, 2% (Viscous) Rx only

A Topical Anesthetic for the Mucous Membrane of the Mouth and Pharynx.

Indications and Usage
Lido...
It is difficult to recommend a maximum dose of any drug for children since this varies as a function of age and weight. For children over 3 years of age who have a normal lean body mass and normal body development, the maximum dose is determined by the child's weight or age. For example: in a child of 5 years weighing 50 lbs., the dose of lidocaine hydrochloride should not exceed 75 to 100 mg (3.7 to 5 mL of lidocaine hydrochloride oral topical solution 2% (viscous)).

For infants and in children under 3 years of age, the solution should be accurately measured and no more than 1.2 mL be applied to the immediate area with a cotton-tipped applicator. Wait at least 3 hours before giving the next dose; a maximum of four doses may be given in a 12-hour period. Lidocaine hydrochloride oral topical solution 2% (viscous) should only be used if the underlying condition requires treatment with a volume of product that is less than or equal to 1.2 mL.

**HOW SUPPLIED**
