Indications and Usage...
limitations; and tolerate side effects with valvular heart disease. A few studies have shown that ezetimibe, when added to an existing statin, can further reduce LDL-C levels in patients with primary hypercholesterolemia. However, the overall effectiveness of ezetimibe in reducing cardiovascular events has not been established.

Dose and Administration

Ezetimibe is available as a tablet for oral administration containing 10 mg of ezetimibe and the following inactive ingredients: sodium starch glycolate, lactose monohydrate, magnesium stearate, povidone, and sodium lauryl sulfate.

Absorption and Distribution

After oral administration, ezetimibe is absorbed and extensively metabolized in a polypeptide chain, along with the active metabolite. Ezetimibe has been shown to be absorbed in a polypeptide chain, and the active metabolite, which is not extensively metabolized in a polypeptide chain, is not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are extensively metabolized in a polypeptide chain. Ezetimibe is eliminated renally, with less than 10% of the administered dose excreted in the bile. Ezetimibe glucuronide is eliminated renally, with more than 90% of the administered dose excreted in the bile. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain. Ezetimibe and ezetimibe glucuronide are not extensively metabolized in a polypeptide chain.
